Subject: REFERENCE LETTER

11.12.2015

To Whom it May Concern,

We are pleased to provide this reference letter for LBNIW. They have successfully managed the NDT inspection program during the installation of two steam generators at Veolia's thermal power plant in Łódź - Poland from December 2014 to November 2015.

LBNIW's performance on this project was very successful. There was a spirit of cooperation and partnering throughout and working with LBNIW has been a very positive experience. The team demonstrated superb skills and dedication and was backed by a field-experienced and mission-oriented management. From day one, LBNIW managed the inspection program to hit every deadline and maintain high inspection rate over this long-term project despite short RT window. Overall their knowledgeable inspectors handled themselves professionally and were always available to assist in our QA process. We relied on their accurate and timely reporting to control our production schedule.

LBNIW's scope of work comprised code compliant inspection of pressure part of the boilers including: radiographic testing of 4700+ welds, ultrasonic testing of 1100+ welds, magnetic particle testing of 1400+ welds, hardness testing of 1200+ welds, and positive material identification of 200+ inspection points.

We are very satisfied with their service as all inspections were delivered on-time, within budget, and with no safety incidents.

Based on our experience with the LBNIW, I would have no hesitation in recommending them to any organization looking for a reliable NDT service provider. LBNIW is a professional company that has the ability and resources to handle inspection projects of considerable size and complexity.

Sincerely,

Bojan Jurakić, dipl. ing.
Technical Project Manager
