TO WHOM IT MAY CONCERN

We take great pleasure in providing LBNiW with this Reference Letter on their participation and contribution to the successful completion of Botnia Fray Bentos pulp mill in Uruguay from April to July of 2007.

LBNiW's scope of work consisted of non-destructive testing of welds on various piping systems according to EN 13480-5. In total, they have tested over 800 welds with RT, 200 welds with UT and many branch connections with PT.

LBNiW demonstrated in-depth knowledge of non-destructive testing techniques and EN standards regarding the inspection of various installations. Their well-trained and skilful personnel were always cooperative, thorough and resourceful and always provided us with assistance and clarification whenever required. When inspection scheduling changes needed to be made due to unforeseen conditions they would respond immediately and effectively. Therefore, it was a very positive experience working with them.

We consider LBNiW to be a very professional ndt contractor and we look forward to maintaining a lasting business relationship with them.
